Objectives of Cash Management Examples of Cash Management Example #1 A computer manufacturing company, Abc Limited, uses supplier Alpha & Co. to purchase raw materialsRaw materials refer to unfinished substances or unrefined natural resources used to manufacture finished goods.read more. Alpha & Co. has the policy of allowing credit of 30-days. Abc limited has \$10 million in cash resources available and has to pay \$2 million to Alpha & Co. after the 30-day period. However, after the 30-day period, it has an investment opportunity of \$10 million. Suppose the company can renegotiate its terms with suppliers allowing more periods. In that case, the delay in payment will allow the company to use cash in the investment and then pay off the amount to Alpha & Co. at a later date from cash generated from other sources. Thus, proper cash management can take investment opportunities and maintain business operations. Example #2 A Company has 120 days of inventory and receivables are due in 60 days. The payable terms are 30 days. The company will face a cash crunch as the funds are blocked in debtors and inventory, and the payables are due in a lesser period. To manage the cash prudently, the company should either speed up the realization of inventory or debtors; or renegotiate the payment terms with creditors. If the company fails to do so, it would need to borrow funds to fill the deficit. Example #3 Beta limited has the policy to pay off its creditors in 60 days and gives its customers a credit period of 30 days. Also, it doesn't hold an inventory of more than ten days. How should the company manage cash flows? Since the payment is made in 60 days and realization is made for debtors and inventory in 40 days, there is idle cash for 20 days. To optimally utilize the same, the company should find an opportunity to invest and maximize profitability. Importance The company should ensure the sufficiency of cash to meet the current obligations and ensure there is no underutilization of funds. It has to strike a balance between liquidity and profitability. Also, businesses depend majorly on debtorsA debtor is a borrower who is liable to pay a certain sum to a credit supplier such as a bank, credit card company or goods supplier. The borrower could be an individual like a home loan seeker or a corporate body borrowing funds for business expansion. read more, and if a debt turns bad, it can impact the cash flows. Therefore, they also help in determining enough provisions for contingencies. The following are the major benefits – Limitations It is very time-consuming and requires specific skills.It increases administrative and consultation charges for the experts hired to perform cash management.Lack of resources and risk-taking ability of the company. Conclusion Recommended Articles This has been a guide to what cash management is and its definition. Here we discuss the objectives of cash management in accounting along with examples and limitations. You can learn more about accounting from the following articles – Definition: Cash management is the efficient collection, disbursement, and investment of cash in an organization while maintaining the company's liquidity. In other words, it is the way in which a particular organization manages its financial operations such as investing cash in different short-term projects, collection of revenues, payment of expenses, and liabilities while ensuring it has sufficient cash available for future use. What Does Cash Management Mean? What is the definition of cash management? In the real world, organizations have strict cash management controls to monitor its inflows and outflows while retaining a sufficient amount in order to take advantage of attractive investments or handle unforeseen liabilities. Efficient management of cash prevents loss of money due to theft or error in processing transactions. Numerous best practices are adopted to enhance management of company's funds. This involves shortening of cash collection periods, regular follow ups for collections, negotiation of favorable terms with suppliers allowing delay in payment periods, and preparation of cash flow forecasts. Businesses also use of technology to speed up cash collection process. They must do all of this while maintaining adequate amount of funds to meet daily operations. Let's take a look at an example. Example A computer manufacturing company, Techno Ltd., uses supplier Beta & Co. to purchase its core materials. Beta & Co. has the policy of allowing its customers who buy on credit to pay within 30-days period. At the moment Techno Ltd. has \$20 million cash resources available and has to pay \$5 million to Beta & Co. after 30-day period for the purchases. However, after 30-day period Techno Ltd. has an investment opportunity requiring use of the full \$20 million cash resources. If the company is able to renegotiate its terms with suppliers allowing 60-day period, the delay in payment will allow the company to benefit by using current funds for the investment and paying suppliers with cash generated next month from other projects. Thus, by properly managing its funds, Techno can take advantage of investment opportunities while maintaining its operations. Summary Definition Define Cash Management: Cash management means a company's ability to allocate its funds efficiently in an effort to cover operating expenses, make investments, repay shareholders, and maintain adequate reserves. Contents1 What Does Cash Management Mean?2 Example3 Summary Definition Cash management is the discipline of managing inflows and outflows of cash. It is a vital process for ensuring the viability of any business. Businesses typically partner with banks and give them custody of their cash assets. Beyond simply holding cash for businesses, banks can help businesses receive cash from their accounts receivable and pay cash to both their accounts payable and other liabilities such as payroll. Why is cash management important? Cash is the primary vehicle that businesses use to pay their financial obligations. Cash is different from value. A company may be valued at \$1 million when considering all of their assets, but they only may have \$50K in cash. Companies need to make sure not to deplete their cash in expenditures more quickly than they receive cash from their receivables. A company whose cash-on-hand dips below the level of their current financial obligations may need to liquidate assets to raise cash or take on a loan. Additionally, a company with insufficient cash-on-hand to build up inventory may miss out on potential sales. Who are the players in cash management? Chief financial officers, treasury managers and corporate treasurers are among the roles responsible for cash management. It is common for businesses to outsource all or part of their cash management responsibilities to service providers like banks. Those in charge of cash management rely on the cash flow statement. The cash flow statement is a report on all inflows and outflows of cash within a company. The cash flow statement will be updated and analyzed daily, with quarterly versions shared with company stakeholders. The cash flow statement will include cash received for accounts payable, cash paid to accounts payable, cash paid for investing and cash paid for financing. Cash-on-hand will be listed at the bottom of a cash flow statement. What is working capital? Working capital is broken down into current assets and current liabilities. Current assets: Cash-on-handAccounts receivable within one yearInventory Current liabilities:Accounts payable within one yearDebt payments due within one year Companies will endeavor to get their current assets above their current liabilities. When they do, they can be said to have sustainable cash flows. If their current liabilities exceed their current receivables they will need to access financing. What are common problems in cash management? Poor management of cash flow: Companies need to have a good understanding of the timing of both receipts and payments of cash. Companies must make sure they are receiving enough cash from their accounts receivable in a timely fashion. Not receiving cash from revenue quickly enough: Revenue is calculated at the moment of a sale, but cash may not be realized for 30 – 90 days. A company may report excellent profits based on revenue, but if they are not collecting their accounts receivable quickly enough (due to long payment terms, inefficient processes or delinquency) then they can run out of cash even though they are reporting profits. How to improve cash management? Regarding cash management support, there are many things companies can do to improve the efficiency of their cash inflows and outflows. Encourage faster payment: Companies can pursue faster payment by reducing the days payable terms on their sales, or by incentivizing buyers to pay more quickly with discounts for early payment. Companies can also embrace faster payment channels such as business credit card payments. Electronic payments such as credit cards aren't delayed by transit time like checks and the funds are also easier to quickly apply. Automate invoicing and payment: Accounts receivable (AR) automation vendors can help businesses deliver their bills electronically and receive electronic payments. Electronic invoices aren't slowed by transit times the way that paper bills are and, because the invoices are already digitized, they can be entered into the buyer's ERP system nearly instantly. Payment process automation can help encourage buyers to pay with faster electronic payments and can speed the cash application process. Improve collections activities: Companies can use best practices in combination with automation solutions to collect their coming due or delinquent receivables more quickly. Collection automation tools can generate automatic "payment coming due" reminder emails that help prevent accounts from becoming delinquent. Collections automation software can also help optimize the daily tasks of collectors and give managers greater insight into the process.
